

8880BZD X-RAY INSPECTION

Explosives, Weapons and Contraband

CROSS-ENHANCED BACKSCATTER, MULTI-ENERGY

X-RAY INSPECTION- *BACKSCATTER*

Cross-enhanced Backscatter and Multi-energy X-ray Technology:

Inorganics (steel, nickel-cadmium, copper) from the transmission image are cross-enhanced to the backscatter image.

Organics (plastics, explosives, narcotics, liquids) from the backscatter image are cross-enhanced to the transmission image.

Both images are presented on one monitor for easier viewing.

The precision of multi-energy backscatter X-ray technology, generous tunnel size, and a shorter footprint come together in the 8880BZD. Autoclear's unique single X-ray focal spot design creates identical pixel-for-pixel overlays of both backscatter and transmission images to produce better views of concealed objects, and display areas of concern in bright color. The 8880BZD scanner features a single generator. This approach is designed to lower operating and maintenance costs, reduce dose exposure, improve image analysis ergonomics, and reduce the system footprint.

- > Autoclear's **Eco-Dose** is the lowest radiation dosage in the industry
- > Creates images that no other machine can
- > Cross-enhancement makes it easier to identify potential threats such as explosives hidden behind batteries in a laptop computer
- > Both transmission and backscatter images appear on one monitor for easier viewing

APPLICATIONS:

- > Military
- > Corrections
- > Corporate, Government, and Private Security
- > Customs and Border Inspection
- > VIP and Diplomatic Protection
- > Embassies and Consulates
- > High-Risk Events
